AI-native product designer who carries work from product scoping and interaction design into production code. Sole designer-builder on HumanX's internal AI product-design workflow platform. Builds agent-readable design infrastructure and workflows for the design team.

EXPERIENCE

JuiceLabs AI Pvt Ltd + HumanX (HX Labs) | Mumbai

Product Designer (Consultant), serving both entities | Mar 2026 - Present

Experience Design Intern (HumanX) | Sep 2025 - Mar 2026

- Sole designer-builder on HX Labs: own product design, front-end implementation, back-end/API wiring and product scoping. Sole GitHub maintainer for the repository, including merging my own pull requests.
- Owned product design of three live customer-facing AI agent surfaces: product-detail, image and video generation, with output reviewed at founder level.
- Authored product specifications for Chat and Refine, Script Detail, Agentic Homescreen, Agentic Dashboard and the Image Agent.
- Designed the account-management authorization model and helped resolve contested permissions rules. Engineering implemented and shipped the module.
- Rebuilt design-system tokens, typography and spacing in v3. Prepared the consumer migration in code and handed the pull request to engineering for merging.
- At JuiceLabs, built a machine-readable component registry and usage rules for coding agents, with build checks for hardcoded values and non-canonical components. Authored the team's prototype-to-pull-request workflow; engineering controls merging.
- Resolved a discovery route hanging beyond an hour by splitting generation into sequential calls rather than upgrading the paid plan. Restored authentication after a database auto-pause and verified sign-in end to end.
- Built an image-to-UI compilation engine for editable, auto-layout Figma output, with regression checks across real product screens.

Arré Voice | Mumbai

Product Design Intern | May 2025 - Jul 2025

- Designed core app and creator-facing surfaces. Shipped social-login and onboarding motion through optimized Bodymovin/JSON exports.
- Built the product's first design system with product and engineering, covering spacing, typography, grids, colour and tokens.
- Ran a structured UX audit and shipped the resulting usability fixes to core screens.

PROJECTS

build-ai-first-storybook | Open-source design-system skill | MIT, 2026

- Published an installable method for coding agents: a machine-readable component registry, status-gated selection and validation before handoff.

Mind Palace | Personal AI research and decision system | 2026

- Built local collection, transcription and scoring with Ollama and Whisper on an 8GB M1. Wrote retrieval and question-driven research tooling that connects collected material to decisions.
- Built a Telegram dispatcher that classifies requests locally and routes execution to frontier coding agents, with file-level undo and an append-only decision ledger.

SKILLS

Design: Product design, interaction design, information architecture, design systems, token architecture, prototyping, Figma and user research.

Engineering: React, TypeScript, JavaScript, Node.js, HTML/CSS, Git, REST APIs and Supabase.

AI: Claude Code, Codex, Ollama, Whisper, prompt/context engineering, LLM pipelines, MCP, design-to-code automation and agent-readable design systems.

EDUCATION

SRM University, Sonepat | Delhi NCR

B.Tech Computer Science Engineering - coursework 2021-2025
